6) e-Consults in Ambulatory Specialty Care – FINALIST

Partners HealthCare Population Health Management

Timothy Ferris, MD, MPH, SVP, Population Health Management, Partners HealthCare, Massachusetts General Hospital, and Massachusetts General Physicians Organization

PROJECT DESCRIPTION

To address the rising rate of specialty referral and continued challenges with specialty access, in 2014, we established the e-Consults program, through which primary care physicians can request direct “doc to doc” consults through a secure electronic referral order platform, for low risk patients for whom a formal consultation may not be necessary. To participate, primary care physicians (PCP) submit a short question to the targeted specialty. The question is routed to the appropriate specialist who reviews the clinical record and provides a written response in 48 hours. The specialist enters the response in the EMR and emails it directly to the PCP. The specialist receives a payment per completed e-Consult reviewed, approximately $75. If the consult is inappropriate for e-Consultation, the specialist requests that the patient is scheduled for an appointment. The PCP is responsible for implementation of e-Consult recommendations.

OUTCOMES ACHIEVED

- 27 active practices across two large ambulatory care sites.
- 2,442 e-Consults have been completed since Jan 1, 2014.
- 1,587 visits avoided. Estimation based on chart review of 100 sample cardiology e-Consults showing that 65% of patients did not have any type of traditional visit within 6 months and a survey of PCPs who would have submitted a referral if the e-consult option had not been available.
- An evaluation of the cardiology e-Consult program found:
  - Growth in traditional cardiology consults during the intervention period less than matched specialties without e-consult program (4.5% vs. 10.1%, p<0.001)
  - E-consult patients were younger than traditional consult patients (55.3 vs. 60.4 years, p<0.001)
  - Surveys show overwhelming patient and provider support for e-Consults
  - Growth: The most recent quarterly volume at the largest site was 88% higher than that of the previous quarter, and 7 times that for the same period in 2014.

LESSONS LEARNED

- e-Consults can replace formal face-to-face consultation in many cases, leading to reduced costs, improved access, and improved provider satisfaction.
- Despite initial concerns regarding patient safety, negative financial impact, and added administrative burden, both PCPs and specialists are satisfied with the ability to respond to patients’ needs more rapidly through e-Consults.
- Initial utilization by PCPs was variable – targeted marketing to PCP practices and a small one-time incentive for participation has driven recent increases in activity.
